

# Week Report 0

## Summary of Presentation: Introduction to CIS 106

- System Analyst is one the the 10 most in demand Tech Jobs for 2021: it requires experience, certifications and requires high level of expertise. \*Linux is the Global Operating System; it runs everywhere.
- It is a required skill.
- It is open source: as a coder you can read, improve and distribute the source code.
- Linus is used by almost every computer
- The students must have a computer that meets the class criteria. A computer that has a good Core processor and memory.

## My github account

The screenshot shows the GitHub profile page for user 'amamez'. The browser address bar shows 'github.com/amamez'. The GitHub navigation bar includes 'Pull requests', 'Issues', 'Marketplace', and 'Explore'. The profile section shows a green and white cross-shaped avatar, the username 'amamez', an 'Edit profile' button, and a note 'Joined 9 days ago'. The 'Overview' tab is selected, showing 'Popular repositories' with one repository: 'cis106-1' (Public), described as 'spring 2022 semester' with an 'HTML' file. Below this, it shows '3 contributions in the last year' with a calendar grid. The calendar grid shows contributions for February, with one contribution on Monday and two on Friday. A legend at the bottom right indicates 'Less' and 'More' contributions with green squares.

## Final Project Research: Pick a project
