Summary of Presentation: Introduction to CIS 106

- System Analyst is one the the 10 most in demand Tech Jobs for 2021: it requires experience, certifications and requires high level of expertise. *Linux is the Global Operating System; it runs everywhere.
- It is a required skill.
- It is open source: as a coder you can read, improve and distribute the source code.
- Linus is used by almost every computer
- The students must have a computer that meets the class criteria. A computer that has a good Core processor and memory.

My github account

The screenshot shows the GitHub profile page for user 'amamez'. The browser address bar shows 'github.com/amamez'. The page header includes navigation links: Pull requests, Issues, Marketplace, and Explore. The profile section on the left shows a green and white cross-shaped avatar, the username 'amamez', an 'Edit profile' button, and a note 'Joined 9 days ago'. The main content area has tabs for Overview, Repositories (1), Projects, Packages, and Stars. Under 'Popular repositories', there is one repository named 'cis106-1' with the description 'spring 2022 semester' and a 'Public' label. Below this, it says '3 contributions in the last year'. A contribution grid shows activity for February, with green squares indicating contributions on Monday, Wednesday, and Friday. A legend at the bottom right of the grid shows a color scale from 'Less' (light green) to 'More' (dark green).
